

13 February 1967

MEMORANDUM FOR: Mr. Carl Duckett, A/DD/S&T

1. In a conversation with Admiral Raborn today, he informed me that Dr. Gibson of the Johns Hopkins Applied Physics Laboratory has undertaken for the Navy a project for a Systems Development approach to electronic countermeasures for use by our aircraft in action.

2. Admiral Raborn thought it would be an extremely good idea if Dr. Gibson and his people could have the benefit of some of our developments in Systems approach philosophy and, in addition, he thought we might even get some useful feedback from Dr. Gibson.

3. Would you explore this matter at your early convenience and take whatever action you think best in these circumstances.

15/  
Rufus Taylor  
Vice Admiral, U. S. Navy  
Deputy Director of Central Intelligence
